

Your AI build isn't delivering what you were promised.

We tell you why, what it costs to fix, and whether it is worth fixing. An outside review of AI and automation work built by an agency, a freelancer, or someone who has since left.

FIRST WORKFLOW \$3,000 includes access, discovery, and the report	EACH ONE AFTER +\$1,000 five workflows: \$7,000	DELIVERED 5 to 10 business days after we have access	SOLD ON ITS OWN No fix required take the fix list anywhere
---	---	--	--

When companies call us

- It works, but the savings never showed up.
- It breaks, and customers notice first.
- The agency moved on and half of it is still manual.
- The one person who understood it left.
- The final invoice is due. Is it actually done?
- There are a dozen automations and nobody knows which matter.

What we check on every workflow

Ownership	You own every account, key, and login
Assembly	Retries, error paths, duplicate handling
Integrations	Survives an API or field change
AI quality	A test set, and someone checks output
Monitoring	Someone is told when it fails
Data handling	Sensitive data goes only where you think
Maintainability	Documented, and changeable without the builder
Cost and value	Run cost, and promised against measured

What you get: one call per workflow, with a costed fix list

Keep

Sound. Document it and give it an owner

Fix

Right design, specific defects, each one costed

Rebuild

Fixing costs more than starting over

Retire

Costs more to run than it returns

Where a baseline can be rebuilt, you also get the number that matters: what each workflow was promised to deliver, and what it delivers today.

01 Second Opinion

The review above. Separate from our Diagnose service, priced per workflow reviewed and agreed before we start.

02 Fix, if you want us to

The fix list done, with documentation and monitoring added. Half the review fee is credited if you start within 60 days.

03 Keep it running

Monitoring, updates, and a quarterly report on what each workflow is worth.

Platforms we review: n8n, Make, Zapier, Power Automate, Workato, Pipedream, Tray.ai; Boomi, MuleSoft, Celigo; UiPath, Automation Anywhere, Blue Prism; Copilot Studio, custom GPTs, Relevance AI, Lindy, Botpress, Voiceflow; Vapi, Retell AI; LangChain, LangGraph, LlamaIndex, CrewAI, OpenAI and Claude agent SDKs; Salesforce Flow, HubSpot workflows, ServiceNow, Airtable, Google Apps Script; custom Python and Node code, serverless functions, and webhooks.

Book a first call: info@practops.com

We don't build what we review unless you ask us to. Findings describe the system, never the builder.
